

GoalWorld — Pitch Deck (Startup Applications)

Version: Startup Credits Application — June 2026 **Format:** Ready for PDF export

Slide 1: The Vision

GoalWorld is the world's first **SportsFi Protocol** on Solana, designed to capture the **5 billion fan base** of the 2026 FIFA World Cup.

We transform passive spectators into **Professional Player Agents** and **Sports Traders** using blockchain technology.

Slide 2: The Opportunity

- **Global Audience:** 5+ Billion football fans ready for a "Second Screen" experience during World Cup 2026
 - **Market Gap:** Traditional betting lacks transparency. Web3 gaming lacks sustainable yield.
 - **The Momentum:** GoalWorld bridges this gap by merging real-world sports performance with decentralized finance (DeFi)
-

Slide 3: The Problem vs. The Solution

The Problem	The GoalWorld Solution
Static Assets — NFTs that don't evolve	Dynamic cNFTs — Assets evolve via state compression & real-world data
Lack of Liquidity — capital locked in NFTs	NFT Lending — Use players as collateral for instant \$GCH loans
Simple Betting — opaque, house-favored	Perpetual Markets — Long/Short team performance via Drift Protocol

Slide 4: The Infinity Engine (Core Innovation)

Our "Zero Value Loss" economic model:

1. **100% of NFT sales revenue** → deposited into Liquid Staking protocols (JitoSOL, mSOL)
2. **Staking yield** → automatically buys back and burns \$GCH token from the market
3. **Circular Flow:** 5-2-3 revenue split (Community Jackpot, Players, Treasury) ensures ecosystem longevity

This creates a **sustainable, deflationary economy backed by real yield** — not speculation.

Slide 5: The Product

- **Genesis Squad:** 528 real football players minted as high-fidelity NFTs with biometric data and real-world performance tracking

- **Manager Career:** Players earn salaries in \$GCH based on real-world status and in-game performance
- **Penalty Betting:** High-frequency 1v1 minigame that burns tokens, maintaining ecosystem liquidity
- **Prediction Markets:** Drift-powered perpetual derivatives on team performance

Slide 6: Technology Stack

Layer	Technology
Blockchain	Solana (L1) — 65k TPS, \$0.001 fees
Smart Contracts	Rust / Anchor Framework
DeFi Integrations	Drift Protocol (derivatives), Jito + Marinade (liquid staking), Pyth Network (oracles)
NFT Infrastructure	Metaplex Bubblegum (compressed NFTs for mass minting)
Real-time Sync	Helius Webhooks (on-chain event streaming)
Web Application	React + TypeScript, deployed on Vercel
Backend	Node.js / Express API + custom fixture oracle
AI Infrastructure	Hermes Agent orchestration (24/7 autonomous operations)

Slide 7: Traction & Stage

- **Devnet MVP live** at play.goalworld.fun
- Wallet connection, fixture-based betting, claim/refund flows operational
- Smart contracts deployed and tested on devnet
- Marketing site live at goalworld.fun
- Terms of Service & Privacy Policy published
- **Mainnet launch:** Q3 2026 (aligned with World Cup 2026)
- **\$GCH Token launch:** Q3 2026

Slide 8: Roadmap

Phase	Timeline	Milestone
Phase 1	Q2 2026 (Current)	Genesis Squad Launch & Devnet MVP
Phase 2	Q3 2026	\$GCH Token Launch & Live Oracle (Mainnet)
Phase 3	Q4 2026	Tactical Mastermind (Auto-Battler Strategy)
Phase 4	2027	Favela Streets (3v3 PvP) & RWA Stadium Management

Slide 9: Team

- **Nico (CEO/Founder)** — Blockchain architect and product strategist. Vision behind the SportsFi protocol and Infinity Engine economic model.
 - **Lucas (Lead Developer)** — Full-stack Solana engineer. Smart contracts, oracle, and API implementation.
 - **Hermes AI Agents** — 24/7 autonomous operations: content generation, marketing pipeline, infrastructure monitoring, and on-chain surveillance.
-

Slide 10: The Ask

GoalWorld is seeking **cloud infrastructure credits** to scale from devnet to mainnet for the World Cup 2026 launch.

Funding needs: - Production API and oracle infrastructure - AI/ML workloads for autonomous content generation pipeline - Database and caching for high-throughput match-day traffic - CI/CD and development environments

The World Cup 2026 is a singular, time-bound market opportunity. Cloud credits enable us to scale infrastructure rapidly and capture it.
